**Subject:** RE: Follow up, Re: question about PCB remediation/closure

Maria

I do not believe there was interior sampling for PCBs at the Brassworks site. I do not think there was anything in the site history that suggested that PCBs would be present inside the building.

**We are committed to service excellence.**

Visit our survey at <http://dnr.wi.gov/customersurvey> to evaluate how I did.

**Subject:** Follow up, Re: question about PCB remediation/closure

Hello again,

Just a reminder--Mike, I'm hoping you can address my questions below.

Expanding a bit on the 2nd question--can you tell me if any contaminant testing (PCBs or anything else) was done on materials inside the Brassworks building? Right now artists are in there working on sculptures and other art for a public open house this weekend.

Thank you,  
 Maria

Peter--

Thanks--this is helpful.

A few years ago I copied everything in the Goodman file, including the 2005 documents. I didn't see any maps or data on the Goodman PCB soil sampling. **Mike, did I miss it--and if so, can you share it?**

Thank you for informing the Goodman leaders about proper management of the PCB contaminated materials. On a related note--**Mike, will Goodman be expected to test for PCBs in materials in the Brassworks building that they will be refurbishing soon for their center expansion?**

Thanks, I appreciate the responses.

Maria

Hello Maria,

For old industrial properties, sometimes there is little information available on what PCB sources might have been. Section 2.1.5 of the October 2008 Closure Request that you sent me references the September 2005 PCB soil sampling requested by WDNR and indicates there was an August 2005 report and a September 2005 report attachment submitted. Do you have copies of those? If not, please request the information from Mike Schmoller with WDNR (cc'd here) as I imagine those documents would contain the information on the soil sampling that you are interested in, including information about suspected PCB sources.

As to your question about responsibility for proper management of PCBs should they perform reconstruction/renovation that may affect residually impacted areas, the Goodman Center as the property owner is responsible for proper management of regulated PCB. To that end, we will contact the Goodman Center to inform them of such responsibility.

Thanks,  
Peter

Subject: Re: question about PCB remediation/closure

Peter,

Thank you.

Yes, I know they tested four soil samples for PCBs. As I said below, there are no maps of where they took these four samples and this soil PCB data is not in the files. So we know nothing about where they tested, what they tested, what the detection limits were, etc. There is nothing in any of the reports suggesting that they identified what the sources of PCBs were, where they were, etc.

How can you appropriately assess and remediate a site without knowing the source of the contaminants and how they were used, pathways of release, etc? I believe Wisconsin's NR 700 rules require some of this, but these rules are rampantly ignored at sites in south central Wisconsin. Consequently, we have situations like Madison Kipp--where the PCBs were "discovered" in 2012, after citizens raised questions about them for decades but DNR said they weren't there because they never tested for them. Goodman, of course, has children playing all over it, so the stakes are even higher.

One further question: What entity is responsible to assure that when Goodman does reconstruction inside the building, they handle the PCBs appropriately? The DNR? Goodman? The contractors?

Thanks,  
Maria

On 5/24/2017 2:24 PM, Ramanauskas, Peter wrote:

Hello Ms. Powell,

I did look over the information you provided to Gary & me. Given the low PCB levels detected in the building, it appears that the remedial actions taken were appropriate (i.e. capping of the residual in the original floor by approximately 20 inches of new concrete underlain with gravel and the removal, cleaning, and/or encapsulation/marking of remaining building columns). Although the owner considered the federal PCB cleanup regulations in the actions they took to address the contamination found in the building materials that exceeded 1 mg/kg, because the as-found concentrations of PCB did not exceed 50 mg/kg, they may not have notified U.S. EPA in light of the regulatory language at 40 CFR 761.50(b)(3). I see that WDNR did request the collection of four soil samples for PCB analysis which resulted in non-detects. Sampling is usually biased to suspected source areas, in this case visibly oil stained areas. Various Federal PCB Policies and Guidance documents may be found here: <https://www.epa.gov/pcbs/policy-and-guidance-polychlorinated-biphenyl-pcbs>

Please let me know if you have additional questions.

Regards,  
Peter

remediation/closure

Hi Peter:

I just heard that the Goodman Center is planning to do some remodeling in the building referred to below--and it reminded me of our exchanges.  
Any chance to look the information over yet?

Thanks,  
Maria

Subject:  
Re:  
question  
about PCB  
remediation  
/closure

Thanks  
Gary, this  
is  
helpful. I  
'm sorry--  
yes, I mean  
the  
closure/reg  
istry  
packet on  
BRRTS:  
[http://dnr.  
wi.gov/botw  
/DownloadBl  
obFile.do?d  
ocSeqNo=344  
05](http://dnr.<br/>wi.gov/botw<br/>/DownloadBl<br/>obFile.do?d<br/>ocSeqNo=344<br/>05)

I didn't  
realize  
that  
contaminate  
d in-place  
building  
material  
didn't need  
to be part  
of this  
document--  
so thanks

for  
clarifying  
that.  
According  
to the  
closure  
request  
report, in  
2005 a  
previous  
consultant  
gathered  
four  
shallow  
soil  
samples and  
had them  
tested  
for PCBs  
and  
reported  
that "none  
of the  
samples  
contained  
detectable  
concentrati  
ons."  
See  
attached,  
pg. 18.  
This PCB  
data isn't  
included  
with the  
other  
data, nor  
are maps of  
where the  
samples  
were taken,  
etc (unless  
I  
am missing  
it). They  
didn't test  
any other  
media or do  
any PCB  
testing  
after 2005.

Given the  
past uses  
of the  
building,  
the fact  
that PCBs  
were found  
throughout  
the  
building,  
past uses

of the  
building,  
and that it  
was  
to be  
developed  
into a  
community  
center, it  
seems they  
would have  
tested more  
thoroughly  
in the  
soils  
there. But  
I don't  
know what  
the  
policies/gu  
idances are  
on this, if  
any.

Mr.  
Ramanauskas  
, can you  
clarify  
this and my  
previous  
questions?

Thanks,  
Maria
